

1. Upon opening the application the user will be directed to a splash screen where they will be prompted to press a button that will continue to the main page.

2. After the user clicks on the “*press to continue*” button they will be taken to a login screen.

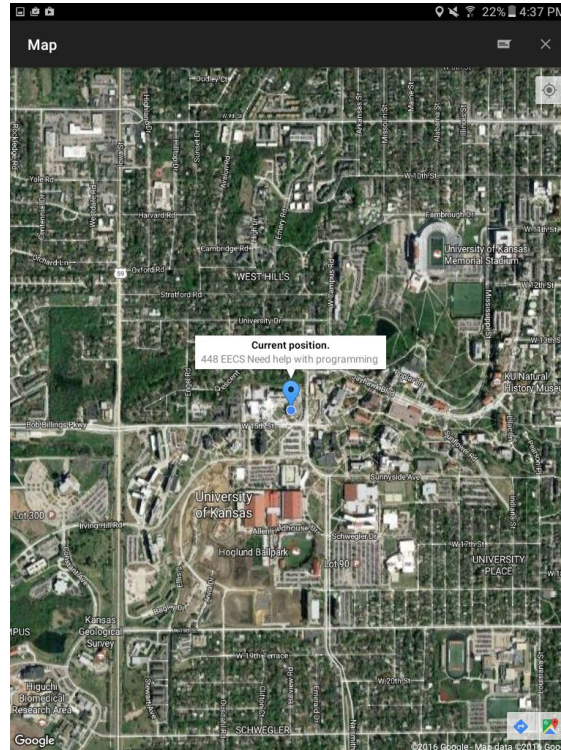

3. The user will be prompted to this screen regardless of whether the current user has a registered username or needs to create a username.
4. If the user needs to create a username they will enter their desired username and password and it will ask the user if they want to create a new user with that username and password.

5. When the user selects yes then their username and password will be added into the database.
6. After the user is added they will be taken to a screen that prompts them to enter department abbreviation, course number, and a description of what they are studying or working on.

A screenshot of the StudyBuddy app's 'Add Study' screen. The app title 'StudyBuddy' is at the top. The screen contains three input fields: 'What subject are you studying?' (with a blue cursor), 'What course number?', and 'Comments:'. A 'SUBMIT!' button is at the bottom.

7. The user then enters these three categories and hits the submit button they will be taken to a map that pinpoints their current location.

8. From this screen the user can view where other people are at and what subject they are studying.

9. If the user finds another user person that is studying the same subject or doing the same assignment then they can click on that users pinpoint and send an instant message to that user.

10. The user can then message back and forth and decide on a place to meet up and study

11. If the user does not know how to explain exactly where they are at then google maps can be used for direction by simply clicking on their location and then clicking on the google maps button in the bottom right hand corner of the app.
